

Alexa Developers Community is a tech based society which helps the students to interact, indulge and together make a atmosphere for learning and leading things, to make a change that reflects out different from other societies in Chandigarh University.

We urge to bring the students interact with the professionals and the expertise in their fields so that they grow more, even we help them by seminars, competitions, volunteering in their respective fields they want to contribute and many more ! This helps to be the better leader in the future with enriched skills within them.

#### Mission:

Our mission is always to bring them such opportunities so that they can build up their knowledge by performing into many competitions and Hackathons, plus motivating them to their field they want to grow in.

#### Vision:

Become essential to our Students and professionals by providing differentiated and Better opportunities with IOT and Machine Learning and many more to help them achieve their aspirations.

So here we come up that with what we bring our future leaders to develop more :

**Skill Development-** ADC can help in promoting and exposing your skills to a wider audience along with necessary feedback and support required for the same. Attending webinars, workshops, training sessions and participating in hackathons organized will also be helpful. **Networking-**ADC provides a platform for developers to collaborate and network fellow batchmates and even seniors which will help in sharing ideas, troubleshooting problems, and learning from others' experiences.

**Professional Development-**ADC helps to learn and upskill in a variety of areas such as voice design, coding, and product development along with which building skills for Alexa can help you expand your skill set and make you more marketable in the job market as the voice assistant market continues to grow and the demand for developers with Alexa skills is also increasing.

The upcoming Alexa lab will be the first voice based lab in North India.

This will be the first voice-based lab in the region, offering cutting-edge technology and resources to help developers create innovative voice-based applications and products. The lab will provide a platform for developers to experiment with Amazon Alexa, learn new skills, and collaborate with other like-minded professionals in the field.

Join us, grab your opportunities and Succeed !!!
